Figure 2. Mean percentage cover and number of species (± standard error) in different plant groups. Percentage cover and number of species are calculated across the boreal subzones. Number of species is also given across forest site types (fertility levels).

Subzones of the boreal zones
HB-SB = Hemiboreal and Southern boreal
MB = Middle boreal
NB = Northern boreal

Forest site types
HRF-HRHF = herb rich forests and herb-rich heath forests
MHF = mesic heath forests
SXHF = sub-xeric heath forests
XHF = xeric heath forests
