Abstract

Slovakia is a magnificent country, which hides a lot of unknown places. Our natural wealth is still in very good condition. Slovakia has got many rural settlements. Many of them know how to use their potential and to give tourists what they are looking for (Feriancová, 2005). There are also some villages whose potential stays dormant. We aimed our attention on one of these villages on the north of Slovakia called Osadné with its surroundings.

There is touristic walkway in this village which goes to National Park of Poloniny. This is the only popular thing that brings tourists over. That's way suggestion is some more leisure places for free time for all age categories placed out of the center of Osadné. Road for bicycles will start at this place with bike hire possibility, and crosscountry skies during a winter. On a newly established playground for children made in fairy story theme, will be placed an advertising board on fairy woods behind village. We plan reconstruction of whole center area, which as a tourist center should be aesthetically attractive. Contemporary park is not representative enough, we would like to open it more, to put more trees, flowers and benches. The area in front of the pub will be filled with greenery and divide huge asphalt site so there could be green parking yard. We designed a summer terrace.

This territory is very interesting the only problem is that it is not well known. Its popularity could rise more with creating more attractions for people of all ages. Rising the amount of activities we could rise more working positions and rise the awareness of Osadné. When we will make these area more attractive and it will be exploited, also the importance and the value will raise.

Key Words

nature tourism, rural settlement, development
